

## Assignment 2 - Practicing Databinding

You learned a lot about Databinding! Time to practice it on your own. In this assignment, you're going to use the different forms of Databinding and see how you may use them in your app.

The snapshot below explains the example app you're starting with and which tasks should be completed as part of this assignment.

Make sure to also answer why you implemented the solution you chose to use.

1. Add a Input field which updates a property ('username') via Two-Way-Binding
2. Output the username property via String Interpolation (in a paragraph below the input)
3. Add a button which may only be clicked if the username is NOT an empty string
4. Upon clicking the button, the username should be reset to an empty string

### Questions for this assignment

**Please complete the tasks outlined in the instructions above. Why did you choose the approach you took? Which problems did you encounter?**
